Requirements Engineering | Product Management | AI & Automation

Experienced in translating business needs into digital solutions, coordinating cross-functional teams and driving process improvements. Passionate about Product Management, AI and delivering measurable business value.

Professional Experience

Digitec Galaxus AG, Zurich

Technical Project Specialist

08.2023 – Present

- Bridge business stakeholders and product development teams, translating requirements into scalable technical solutions.
- Lead language technology, automation and AI-driven process improvement initiatives across cross-functional teams.
- Analyse business processes to identify opportunities for optimisation, standardisation and automation across operational workflows.
- Evaluate, implement and optimise localisation platforms, language technologies and LLM-based solutions, supporting scalable multilingual content operations.
- Own and drive project delivery, process optimisation, incident management and change management, ensuring operational stability and continuous improvement.
- Partner with leadership on technology strategy, team positioning and resource/budget planning.
- Design, maintain and improve tools and workflows (Jira, Confluence and related systems) to support efficient, scalable delivery across teams.
- Develop and maintain documentation standards, operational guidelines and best practices to support sustainable operations, improve consistency and enable effective knowledge sharing.
- Provide hands-on linguistic support, including translation, transcreation, post-editing and linguistic QA (German → Italian).
